

## A Smarter Way to Mental Health

Faro10 is a cloud-based software platform that offers a way for mental health providers, patients and patient observers to objectively track treatment progress through the assessment of symptoms, both observed and self-reported.

### Secure, Real-time Data

Patients can easily track their moods, medications, symptoms and treatment activities, as well as make journal entries on a regular basis. Patient observers such as family and trusted friends are also able to submit their own reports through the Faro10 app. All information is sent privately to the patient's clinician(s), who can review patient dashboards in real time, administer computer-based exercises and easily collaborate with other providers.

Share your story on social media with **#mentalhealthanalytics**

“ Pulling together information regarding your patient’s physical health, medication use, daily life and mood all in one place allows both patients and clinicians to more easily find patterns and correlations. Faro10 is also a powerful collaboration tool for all clinicians involved in your patient’s care. ”

## Key Features & Benefits

### The Faro10 Solution

#### What Faro10 Offers Clinicians

Faro10 helps clinicians provide better treatment. The platform collects frequent, detailed feedback from patients and observers. Clinicians can use this holistic view, along with information on prescription consistency and effectiveness, to provide an evidence-based approach to treatment.

#### Revenue Benefits for Providers

Faro10 is HIPAA compliant and automates service areas such as computer-based assessments, documentation, health reporting and collaborative treatment. This reduces time spent on paperwork and insurance compliance and leaves more time available to see patients.

#### Looking at the Complete Picture

Faro10's analysis of data (including a patient's social media usage) serves as an early warning system. Faro10 automatically alerts a patient's emergency contacts upon identifying potentially harmful behavior.

#### Key Features for Clinicians:

Patient list with quick status of mental health in real time

Real-time charts and graphs of patient wellness

Real-time status of patient symptoms and adverse events

Observer journals for each patient

Patient prescriptions and medication success tracking

Option to digitally share patient information with other clinicians

One-way message center for quick messages to patients

Digitally signed consent and release forms

Evidence-based clinic success metrics

**50.6%**

of children with mental disorders received treatment within the past year.

**43.8 million**

adults in the U.S. experience some form of mental illness in a given year.

**10 million**

adults in the U.S. live with a serious mental illness.

## How to Use the Application

### An Introduction to Faro10

#### Getting Started and Using the Platform Modules

Faro10 gives clinicians access to powerful analysis and collaboration tools. To begin, visit [Faro10.com](http://Faro10.com) to register as a clinician. Practitioners can immediately begin using the system to streamline processes such as collecting informed consent, HIPAA acknowledgment and other forms.

Any client population can benefit from Faro10. For some, it may be the collaboration functionality between observers and clinicians, some might benefit more from medication effectiveness and mood tracking, while others may utilize all features, including journaling and computer-based exercises.

Introduce Faro10 to your clients and guide them to use the features that best fit into their course of treatment. Faro10 has five modules purpose-built to address clinic challenges:

#### Patient Dashboard

A comprehensive set of charts and graphs on patient reported mood levels, percent of mood change over the course of treatment, prescription consistency, social interactions, observed mood, symptomatology and other key metrics. The dashboard also provides access to the patient journal, observer feedback, history of medication, the patient scorecard, social media insights and computer-based exercises.

#### Patient Scorecard

Assists in reporting authorizations and treatment progress when working with insurance companies. This includes percent change in symptoms and symptomatology over time. The scorecard has a wealth of hard data that can be easily provided to an insurance company on the progress of treatment.

#### Social Media Insights

Offers instant analysis and early detection of dangerous behavior, changes in health and psychotic episodes (when patients give Faro10 permission to access their social media accounts). Faro10 tracks patterns in social media use, detects any anomalies and alerts clinicians of potentially harmful behavior.

#### Computer-based Exercises

These exercises are self-administered and will help patients in analyzing their own situations and working toward developing positive coping tools. Some insurance companies will also reimburse for computer-based exercises. Patients can access their clinician-provided exercises on the Faro10 website.

#### Collaborative Care

Coordinates care with any clinicians or medical providers working with a patient via the collaborative care module. This allows clinicians to work together, share information and ensure consistent care and communication about their patient.
